

Worksheet 2.1

Student Name :

UID:

Branch: CSE BTECH

Section/Group:

Semester: 4th

Date of Performance: 16/03/2022

Subject Name: PYTHON

1. Aim/Overview of the practical:

Python program to check whether the string is Symmetrical or Palindrome

CODE IN TEXT FORM

```
def palindrome(a):

    mid = (len(a)-1)//2
    start = 0
    last = len(a)-1
    flag = 0

    while(start <= mid):

        if (a[start]== a[last]):

            start += 1
            last -= 1

        else:
            flag = 1
            break;

    if flag == 0:
        print("The entered string is palindrome")
    else:
        print("The entered string is not palindrome")
```

2 . Python program to find uncommon words from two Strings

CODE IN TEXT FORM

```
def UncommonWords(A, B):

    count = {}

    for word in A.split():
        count[word] = count.get(word, 0) + 1

    for word in B.split():
        count[word] = count.get(word, 0) + 1

    return [word for word in count if count[word] == 1]

A = "I AM A GOOD PERSON"
B = "YESS, I AM A GOOD PERSON"

print(UncommonWords(A, B))

3 . Write a Python program to add 'ing' at the end of a given string (length should be at least 3). If the given string already ends with 'ing' then add 'ly' instead. If the string length of the given string is less than 3, leave it unchanged. Example:- Sample String : 'abc' Expected Result : 'abcing' Sample String : 'string' Expected Result : 'stringly'

CODE IN TEXT FORM –

```
def add_string(str1):
    length = len(str1)

    if length > 2:
        if str1[-3:] == 'ing':
            str1 += 'ly'
        else:
            str1 += 'ing'

    return str1
print(add_string('ab'))
print(add_string('abc'))
print(add_string('string'))
```

CODE IN COMPILER-
